# International Data Centers

*Bringing your business to the world.*

- Telmex USA offers a single source across the region for both high-quality Data Center services and robust network services.
- This highly scalable, highly available shared solution provides a cost-effective alternative to in-house facilities.
- We provide direct backbone access to our network, plus access to other domestic or international carriers according to your needs.
- 7x24x365 monitoring is available via our highly trained network management staff.

- Industry-leading systems bring you continuous power, environmental control, security, monitoring and more.
- Specially-trained security personnel and procedures offer physical security, data and information protection.
- Professional Services are available for remote basic or specialized support.
- Business continuity solutions guarantee uninterrupted operation and seamless interconnection to our robust MPLS backbone.

International Data Center services are part of our full portfolio of products comprised of traditional telephony services, as well as the next generation of data and multimedia services over IP. Together with our affiliates, Telmex USA's international presence, commitment to quality and to customer service enables our teams to provide you with the highest level of service.
